SUMMARY

Front-End / Full-Stack Developer with 2+ years shipping production web apps across the **Next.js**, **React**, and **TypeScript** ecosystem — from a multi-tenant, multi-country exam platform at York Press to custom **Shopify** and headless storefronts. Strong on performance, clean component architecture, **GraphQL** data layers, and conversion-focused e-commerce.

EDUCATION

Holy Spirit University of Kaslik (USEK) Kaslik, Lebanon <i>Bachelor's Degree in Computer Science</i>	2021 – 2024
Collège Sainte Famille Zalka, Lebanon <i>Lebanese Baccalaureate — General Sciences</i>	2020 – 2021

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Java, C++, HTML, CSS
- **Frameworks & Libraries:** Next.js, React.js, React Native, Node.js, Express, Redux, GraphQL / Apollo Client, MUI, Emotion, Tailwind CSS, Shopify Liquid
- **Tools & Platforms:** Git, Docker, Figma, Postman, Shopify, Vercel, Zustand, next-intl (i18n / RTL), Meta Pixel / GA4
- **Databases:** MongoDB, Firebase

RELEVANT EXPERIENCE

York Press Beirut, Lebanon <i>Front-End Developer (Intern → Part-Time → Full-Time)</i>	2024 – 2026
• Led a full UI/UX redesign of a multi-tenant exam-registration platform (Next.js, React, MUI), migrating the brand identity to a centralized theme with reusable design tokens and restyling ~30 shared components across 90+ files, shipped to 5 country tenants from a single codebase. • Rebuilt the marketing site from scratch in TypeScript, re-architecting from Next.js 13 Pages Router to Next.js 15 App Router (React 18→19, MUI 5→7) with Emotion-styled components and per-tenant GraphQL data fetching via Apollo Client. • Built the school bulk-registration flow end-to-end — batch/search filtering, per-student subject selection with live price totals, and single-mutation GraphQL submission — with responsive desktop and mobile interfaces and a checkout summary. • Integrated Elementary & Middle School education-level logic via a declarative access matrix (3 levels × 5 tenants) enforced with Next.js edge-middleware route guards and permission-filtered navigation. • Engineered a tenant-aware payment layer routing each country and user flow to its own gateway (PayPal, Paymob, offline) through a reusable React hook, with redirect checkout and a Next.js API callback proxying per-tenant backend endpoints. • Implemented cross-site marketing attribution — consent-gated Meta Pixel events and persistent UTM/click-ID capture forwarded into signup mutations — and launched Libya as the platform's 5th tenant (config, ACLs, checkout, and gated auth flows). • Led a 3-engineer team building the exam-registration platform's iOS & Android app in React Native / Expo (TypeScript, Expo Router), owning architecture, code standards, and delivery. • Shipped OTP verification for mobile signup and password reset full-stack: GraphQL mutations in a Node.js / TypeScript auth microservice (hashed 6-digit codes with a TTL, attempt caps, rate limiting, single-use reset tokens) and the matching React Native screens and flows.	

PROJECTS

Uncle J Nutrition Freelance E-Commerce	Jan. 2026
• Built and customized a conversion-focused Shopify storefront with Liquid theming, custom sections, and mobile-first responsive design — unclejnutrition.com. • Delivered end-to-end as a freelance engagement: custom product and collection templates, theme performance tuning, and full store configuration.	
The Outlets Co-Founder & Developer	Since 2022
• Co-founded the e-commerce business and built its custom Shopify Liquid storefront with bespoke sections and responsive product pages — theoutletslb.com. • Own product, operations, and day-to-day decision-making, running the store end-to-end from catalog and merchandising to checkout.	
Brand Atelier Custom Web Platform	2026
• Architected a bilingual (English / Arabic) marketing-agency site on Next.js 16 App Router (React 19, MUI 9, Emotion) with next-intl i18n and true RTL that physically flips CSS via a stylis-plugin-rtl Emotion cache and direction-aware theme. • Built GDPR-style consent-gated analytics (GA4, Meta Pixel, LinkedIn Insight Tag), SEO routes (sitemap / robots + metadata), an EmailJS contact form, and a strict styled()-only component architecture.
